

Creating Centos Base Image

```
$ sudo yum install febootstrap (superceded by supermin project)
```

```
$ febootstrap
```

```
-u http://centos.mirror.iweb.ca/6.5/updates/x86_64
```

```
-i iputils
```

```
-i emacs
```

```
-i iproute
```

```
-i coreutils
```

```
-i tar
```

```
-i unzip
```

```
-i zip
```

```
-i yum
```

```
-i device-mapper-libs
```

```
-i which
```

```
-i http://dl.fedoraproject.org/pub/epel/6/x86_64/epel-release-6-8.noarch.rpm
```

```
centos65
```

```
centos65
```

```
http://centos.mirror.iweb.ca/6.5/os/x86_64/
```

```
$ cd centos65
```

```
$ tar -czf centos65.tar.gz .
```

```
$ docker import - taylodl/centos < centos65.tar.gz
```

```
$ docker tag `docker images -q taylodl/centos` taylodl/centos:6.5
```

```
$ docker push taylodl/centos:6.5
```

```
$ docker push taylodl/centos:latest
```
